

GEOFFREY KAMAU

IT Assistant | Computer Scientist

Phone: 0790032674 | Email: jeffkamau9497@gmail.com

Portfolio: [geofrey94.vercel.app](#) | GitHub: [github.com/Jeff9497](#) | LinkedIn: [linkedin.com/in/geofrey-kamau](#)

PROFESSIONAL SUMMARY

Motivated and detail-oriented Computer Science graduate with a strong technical foundation in hardware troubleshooting, software support, networking, and system administration. Experienced in configuring IT equipment, monitoring system performance, and resolving user-facing technical issues efficiently. Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate with hands-on experience across Linux, networking protocols, cloud platforms, and software development. Eager to apply practical IT skills to support day-to-day technology operations and deliver reliable, user-centred IT assistance in a fast-paced organisational environment.

EDUCATION

Bachelor of Science in Computer Science

Muranga University of Technology | August 2025

Relevant Coursework: Computer Networks, Operating Systems, Network Security, Database Management, Software Engineering, Data Structures & Algorithms, Computer Hardware & Architecture, Internet of Things, Cloud Computing

TECHNICAL SKILLS

Hardware Support: PC assembly & disassembly, hardware diagnostics, peripheral configuration, equipment setup & installation, troubleshooting desktops, laptops, and printers

Software & OS: Windows OS, Linux (Ubuntu), software installation & configuration, application access management, system updates & patching

Networking: TCP/IP, DNS, DHCP, LAN/WAN, network troubleshooting, Wi-Fi configuration, basic firewall & router setup, IoT protocols

System Monitoring: Performance monitoring, system health checks, log analysis, uptime management, resource utilisation tracking

User Support & Access: IT helpdesk support, user account management, system & application access configuration, end-user documentation & training

Cloud & DevOps: Oracle Cloud Infrastructure, Docker, Linux administration, CI/CD pipelines, REST APIs

Programming: Python, JavaScript, Bash scripting, Node.js

CERTIFICATIONS

Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate

Oracle | July 2025

Covers cloud infrastructure fundamentals, system architecture, AI integration, and enterprise IT platform management.

KEY PROJECTS

D-Link Decryptor 2.0 – Network Security & Firmware Analysis

Network Security, Firmware, Binary Analysis, Systems

- Developed a firmware analysis tool for D-Link routers, converting binary files to readable assembly language — demonstrating deep understanding of network hardware architecture and security.
- Applied network diagnostics and security analysis skills relevant to IT infrastructure support and troubleshooting.

- Identified and documented system vulnerabilities, producing clear technical reports for review.

WhatsApp Automation Suite – System Integration & IT Support Automation

Python, API Orchestration, Webhooks, System Monitoring

- Built and configured automated notification and reminder systems, demonstrating practical skills in system setup, integration, and monitoring.
- Managed real-time system performance and uptime of deployed automation services, troubleshooting issues as they arose.
- Created end-user documentation and guides to support non-technical users in accessing and using the systems.

LAX – Local AI System Deployment & Configuration

Python, Linux, System Configuration, Local Deployment

- Configured and deployed local AI systems on Linux environments without cloud dependency, demonstrating hands-on OS administration and software setup skills.
- Troubleshot software installation, dependency conflicts, and performance issues across different system configurations.
- Optimised system resource utilisation for reliable performance in resource-constrained environments.

Ollama8Web – Web Application Deployment & System Monitoring

Python, Next.js, REST APIs, System Performance

- Deployed and configured a full-stack web application, managing server setup, API configuration, and application access controls.
- Monitored system performance and response times, identifying bottlenecks and implementing optimisations for improved reliability.
- Provided ongoing technical support and maintenance for the deployed application environment.

EvSentry8 & FarMVi8ioN – IoT Device Configuration & Monitoring

Python, IoT, Edge Computing, Real-time Monitoring

- Configured and deployed IoT devices and edge computing systems for real-time environmental monitoring — directly applicable to IT equipment setup and system performance monitoring.
- Monitored system health and data pipeline performance, troubleshooting connectivity and hardware issues in the field.
- Ensured reliable operation of deployed systems through proactive monitoring and rapid issue resolution.

AREAS OF EXPERTISE

- **Hardware Troubleshooting:** Diagnosing and resolving hardware faults across desktops, laptops, peripherals, and network devices
- **Software & Application Support:** Installing, configuring, and troubleshooting software; managing system and application access
- **Networking & Connectivity:** TCP/IP, LAN/WAN setup, Wi-Fi configuration, network troubleshooting, and connectivity resolution
- **System Performance Monitoring:** Tracking resource utilisation, uptime, and system health; proactive issue detection and resolution
- **IT Equipment Configuration:** Setting up and configuring new hardware, peripherals, and workstations for end-user readiness
- **User Support & Communication:** Responding to IT inquiries, providing clear technical guidance, and creating end-user documentation

CORE COMPETENCIES

- Strong analytical and fault-finding problem-solving skills
- Patient and clear communication with non-technical users

- Ability to prioritise and manage multiple IT support requests
- Attention to detail in system configuration and documentation
- Quick learner and adaptable to new technologies and environments
- Reliable and proactive approach to system monitoring and maintenance
